- · Specify the sections early in the design proposal.
- · Find proposal that other students have authored under your adviser and look at them closely.

At the end of the session, you should be able to: •grasp the habits a researcher can follow in order

to establish good proposal writing; and

- · Determine whether your program or institution offers a course on proposal development or some similar
- · Sit down with your adviser and go over his/her preferred format for a proposal.

•Early in the process of research, write the ideas rather than talk about them.

 Work through several drafts as a proposal rather than trying to polish the first draft.

# WRITING THE PROPOSAL

•Do not edit your proposal at the early-draft stage.

Instead, consider franklins (1986) three stage model which is helpful in developing proposals.

# Franklin's (1986) three stage model

- First, develop an outline it could be sentence or word outline or visual map.
- Write out a draft and then shift and sort ideas, moving around entire paragraphs in the manuscript.
- 3. Finally, edit and polish each sentence.

#### WRITING THE PROPOSAL

As a good researcher, you must establish the discipline or habit of writing in a regular and continuous way on your proposal.

1. Make writing a daily activity, regardless of mood, regardless of readiness to write.

2. If you think you don't have time for writing, begin charting your daily activities for a week or two in half-hour blocks. It's likely you'll find a time to write.

Schedule writing tasks so that you plan to work on specific, manageable units of writing in each session.

7. Keep daily charts. Graph at least three things: (a) time spent writing, (b) page equivalents finished, and (c) percentage of planned task completed.

8. Share your writing with supportive, constructive friends until you feel ready to go public.

WRITING THE PROPOSAL

In addition to conceptualizing the writing process for a proposal, researchers need to anticipate the ethical issues that may arise during their studies.

WRITING THE PROPOSAL

Here are some ethical issues that needs to be considered in writing the proposals.

**WEEK 7 WRITING STRATEGIES AND ETHICAL CONSIDERATION** 

# WRITING THE PROPOSAL

1. Ethical issues in Research Problem.

> During the identification of the research problem, it is important to identify a problem that will benefit individuals being studied, one that will be meaningful for others besides the researcher.

# WRITING THE PROPOSAL

2. Ethical issues in the Purpose and Questions.

> Proposal developers need to convey the purpose of the study that will be described to the participants.

# 3. Ethical issues in Data Collection.

The researcher needs to respect the participants and the sites for research. Do not put participants at risk, and respect vulnerable populations.

#### WRITING THE PROPOSAL

# Ethical issues in Data Collection.

One issue to anticipate about confidentiality is that some participants may not want to have their identity remain confidential.

Researchers also need to anticipate the possibility of harmful, intimate information being disclosed during the data collection process.

# 4. Ethical issues in Data Analysis and Interpretation

Consider the following:

- How will the study protect the anonymity of individuals, roles, and incidents in the project?
- Data, once analyzed, need to be kept for a reasonable period (recommended 5-10 years)

# 4. Ethical issues in Data Analysis and Interpretation

- The question of who owns the data once it is collected and analyzed also can be an issue that splits research teams and divides individuals
- In the interpretation of data, researchers need to provide an accurate account of information. This accuracy may require debriefing between the researcher and participants both qualitative and quantitative researches.

ASSESSMENT.

Make a 3–5-minute vlog about dos and don'ts in writing a research proposal based on the lessons we have discussed.
